PCIS — CANONICAL COMPLETE CORPUS (A–N)

Presentation and Deposit Statement

Author: Pierernesto Di Paolo

Year: 2026

1. Purpose of This Document

This document accompanies the canonical archival deposit of the complete PCIS corpus.
Its purpose is to:

- describe the contents of the deposited archive,
- declare the legal and epistemic status of the corpus,
- fix scientific priority and authorship,
- provide a clear statement of usage permissions and prohibitions,
- enable long-term verification and integrity checking.

This document is not part of the theoretical corpus itself.
It serves exclusively as a **presentation, certification, and archival descriptor**.

2. Description of the Deposited Archive

The deposited archive constitutes the **complete and definitive release** of the PCIS corpus.

The archive contains the full set of works identified as **Opera A through Opera N**, including:

- the foundational PCIS formalization,
- all derived structural theorems,
- limits, invariance results, regeneration bounds,
- governance, auditability, and long-term stability analyses,
- a final canonical meta-synthesis and closure statement.

All documents are provided in PDF format and are intended to be read as a single, coherent body of work.

3. Canonical Status of the Corpus

The PCIS corpus deposited here is declared **FORMALLY CLOSED**.

This means:

- no further axiomatic extensions are permitted within this corpus,
- no new foundational principles are to be added,
- no reinterpretation may be presented as part of the PCIS theory itself.

Any future work may only be:

- applied,
- interpretative,
- comparative,
- or critical,

and must be clearly identified as **external** to the closed corpus.

4. Scope and Nature of the Work

The PCIS corpus is a **theoretical and mathematical framework**.

It does **not**:

- predict empirical outcomes,
- guarantee correctness, safety, or optimality,
- prescribe specific implementations,
- replace empirical, legal, or ethical evaluation.

Its sole purpose is to provide a **necessary and sufficient structural criterion** for the conservation of identity in artificial and cognitive systems.

5. Usage Permissions

The following uses are explicitly permitted:

- reading and consultation,
- private and academic study,
- citation in scholarly works, provided full and correct attribution is given.

Citation must include:

- author name,
- title of the corpus or specific Opera,
- year of publication,
- reference to the canonical archive.

6. Prohibited Uses

The following uses are explicitly prohibited **without prior written authorization** from the author:

- reproduction beyond personal or academic citation,
- modification, adaptation, or partial reuse,
- commercial exploitation,
- incorporation into proprietary systems,
- attribution of derivative or extended works to the author.

No license is granted implicitly or explicitly by this deposit.

7. Authorship and AI Usage Statement

Artificial intelligence systems were used **exclusively as drafting, editing, and verification instruments**.

They do **not** hold:

- authorship,
- intellectual ownership,
- responsibility for content.

All intellectual responsibility, authorship, and ownership belong **exclusively** to the human author named above.

8. Integrity and Verifiability

This release is accompanied by a **SHA-256 cryptographic manifest**.

The manifest allows:

- verification of file integrity,
- detection of any alteration,
- comparison across mirrors and archives.

Any copy whose hashes differ from the manifest must be considered **non-canonical**.

9. Archival Declaration

This deposit constitutes the **definitive canonical archival release** of the PCIS corpus.

The author declares that:

- the corpus is complete,
- the corpus is closed,
- the corpus represents the final authoritative version.

No subsequent document may supersede this release without explicit revocation by the author.

10. Final Declaration

This archive fixes priority, authorship, and content of the PCIS corpus in a permanent, publicly verifiable form.

Any future reference to PCIS must refer to this canonical release or explicitly declare deviation from it.
